### TRANSNATIONAL MEETING IN TRAPANI

The 1<sup>st</sup> and 2<sup>nd</sup> March 2023, the 3<sup>rd</sup> meeting of the Erasmus+ IN-HAPTIC.VET project was held in Trapani (Sicily), along with the partners ilnformatica, Studio Risorse Srl, Innetica, Akademia Humanistyczno-Ekonomiczna w Łodzi, Academia de Formação do Norte and The European Education and Learning Institute.

We evaluated the In-Haptic.App, a very creative project product that will allow teachers to develop educational content that is easily usable by the visually impaired and blind, using sound, ASMR, vibration, and haptic feedback. After the evaluation of the app, all partners discussed other matters like the next project meetings, pending tasks and administrative issues.

### NEWSLETTER #3 MARCH 2023

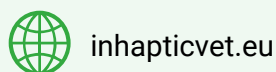

## IN-HAPTIC APP: APPLICATION FOR TACTILE INCLUSIVE TEACHING

This is an application for the design of multimedia learning contents characterized by video, audio and tactile track and will allow its use on touch devices (smartphone/tablet) equipped with the haptic- vibrational component. In addition, ASMR and binaural acoustic streams will be used for learner- learning enhancement. It is now available for download for Android and iOS.
