Haptic Innovation Takes Center Stage in Rethymno

The IN-Haptic project partners met in the picturesque Greek city of Rethymno for their 4th transnational meeting, marking an important milestone in the development of this innovative vocational training initiative.

At the heart of the discussions was the O4 "Training Programme for the VET IN.Haptic Expert", spearheaded by the Greek partner EELI. The group reviewed the work completed to date, including the testing of the training platform and the collection of valuable user feedback. With clear deadlines established, the partners are now primed to finalize this critical output, ensuring that the training program meets the needs of aspiring haptic technology experts across Europe.

Parallel to the training program, the team also made significant progress on the O5 "Competence Validation Tool." Led by the Portuguese partner AFN, this output will provide a robust system for assessing the skills and knowledge gained by VET IN.Haptic trainees. The partners aligned on the work plan and development methodology, setting the stage for the tool's seamless integration with the overall training ecosystem.

With momentum building and the project's innovative solutions taking shape, the IN-Haptic team is primed to continue driving meaningful change in the field of haptic technology education. Stay tuned for more updates as this trailblazing initiative progresses!
